

**INFINITY**

Conveyor systems

# A myriad of conveyor solutions for tissue products.

At Infinity machine, we customize our conveyors to meet your tissue packaging needs. While no two conveyor systems are the same, they share the same innovative thinking, advanced mechanical modules and 7 gauge steel construction for reliability and performance. With our advanced mechanical and electrical design, we specialize in building systems to work with your upstream and downstream converting and packaging equipment. Our team will customize the perfect solution to work efficiently with your folder, rewinder, wrapper, casepacker, bundler, or palletizer.

## Key features

- Built with rugged 7 gauge steel
- PLC speed control
- Can be integrated with existing systems

## From idea to inception

Infinity Machine & Engineering Corporation is a full service conveyor supplier- meaning we can design plant layouts, build the systems both mechanically and electrically, set-up the systems at our facility for customer check-outs (as space allows), install and program the system to work efficiently. Utilizing PLC control and variable speed drives, we can vary conveyor speeds based on the operating requirements of the line. This type of intelligent system increases operating throughput and decreases the likelihood of product damage on the conveyor system.
